

Coucou

curated communication tool

Lena Heisel, Susanne Höpfner, Paul Lengert, Johanna Winkens

Concept

Problem: Connecting with someone who has dementia can be challenging

Idea: Web-application for relatives and friends of dementia patients who cannot be there
→ creates a curated audio message for the dementia patient to listen to

Aim: Revive shared memories and strengthen the bond between relatives and patients

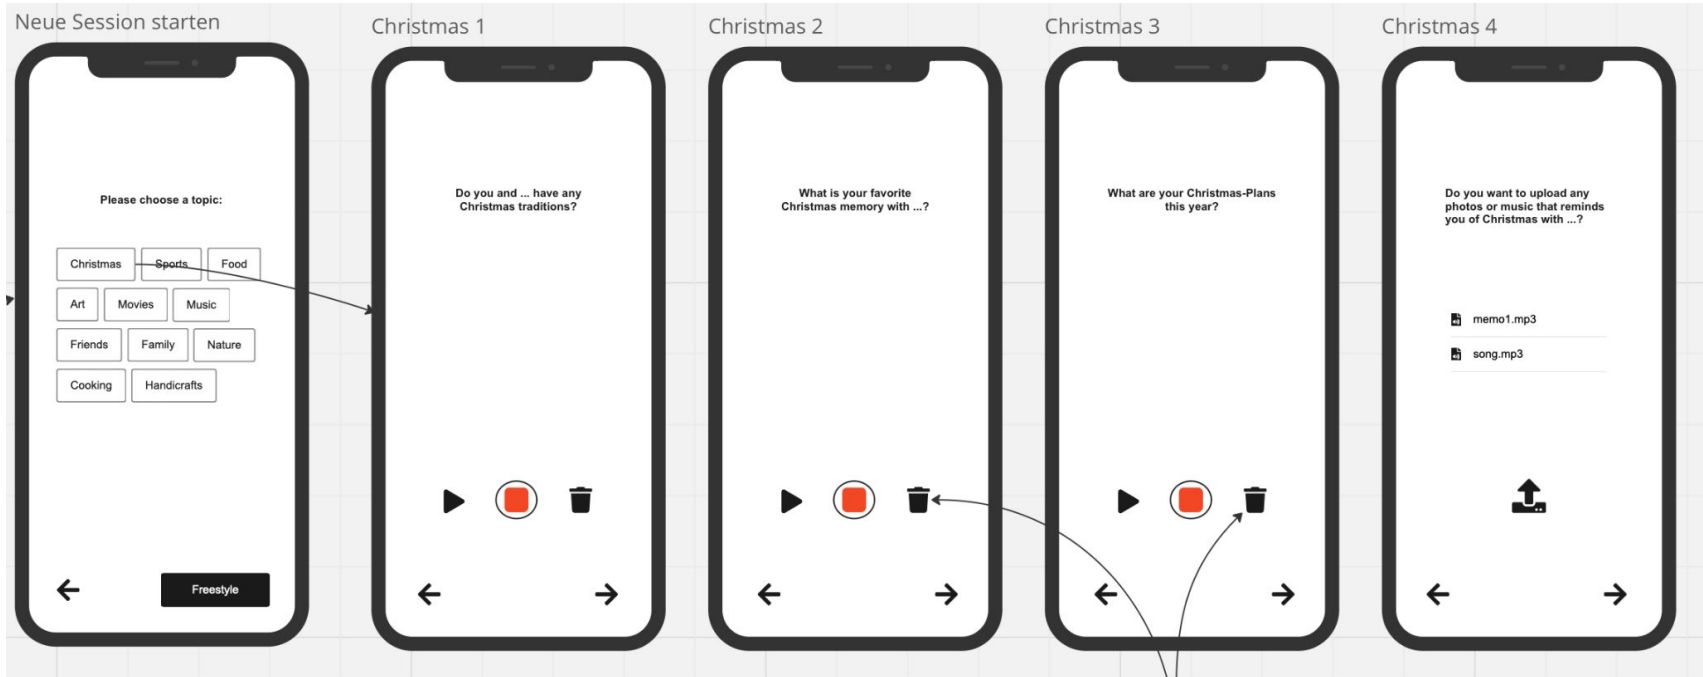

Use Case

- Friends or relatives answer prompts on a specific topic
→ audio message is created from answers, narrated and embellished by hand-picked sounds for each topic
- People with dementia receive the message as a phone call
